

PACKET POWER

Packet Power offers the ideal solution for adding monitoring to your existing panelboards -- quickly, easily and cost-effectively.

Branch Circuit Monitoring

Easily Add Monitoring to Panelboards

- Prevent unplanned outages
- Balance loads more effectively
- Manage current and future facility capacity
- Allocate energy costs at the circuit or panel level

Why Packet Power Wireless Branch Circuit Monitoring?

Installs easily

- Split core CTs install without having to disconnect critical systems
- No data wiring to panels needed
- Flexible current sensor harnesses
- Simple configuration utility

Open

- Compatible with any existing hardware
- Send data to any DCIM or BMS using SNMP or Modbus TCP/IP

Cost effective

- Lower installation costs
- Fully self-optimizing wireless network lowers ongoing support costs

Secure

- Unique purpose-build wireless protocol can only be used for monitoring and wired data network
- Full separation of wireless monitoring and wired data network
- Proven in data centers worldwide
