

Highlight™ Visual Temperature Monitor

Highlight™ is a visual temperature monitoring device that provides instant visual awareness of temperature level in the data center. Displays Green, Yellow, or Red based on temperature level. Customizable threshold settings. Shows temperature in Fahrenheit or Celsius.

The innovative Highlight™ provides operators with an easy way to “see” hot spots while on the data center floor. This data center temperature monitoring light changes color to let you know at once whether the temperature of a rack or the room is too high or just right, helping you maintain a safe operating environment. The light is green when data center temperatures are good, yellow when its getting too warm, and red when it is too hot.

The Highlight™ is a stand-alone unit and specifically not integrated to the network so it can be easily deployed.

Key Features

- Light is always on displaying current temperature and glowing Green, Yellow or Red based on temperature threshold settings
- Can be set to show Fahrenheit or Celsius
- Lightning Fast setup: Plug it in and Go
- Magnet to metal racks or zip-tie to desired location
- Can daisy chain up to 10 units every 5 - 30 feet
- Customizable temperature settings
